

Oil in Water Detection

At POGC we are experts in the detection of oil in and on water and are able to help you with all of your oil in water detection needs.

We represent the worlds leading range of oil in water detection equipment including Turner Designs Hydrocarbon Instruments, GE Leakwise and Agar Corporation.

We have a range of products and are able to:

- Detect oil sheen in a retention pit or pond
- Test a grab sample in the ppm/ppb range
- Monitor an online flow in the ppm/ppb range
- Accurately control the interface level and dewatering of a process vessel
- Determine the % oil in water or water in oil for a flowing process line

Please feel free to contact us if we can help further

POGC's other areas of expertise include:

- Explosion & overpressure protection systems.
- Fire & Gas Protection Systems.
- Controls for Burner Management Systems.
- Analysers for compliance monitoring and process control.

We believe our people have the best technical and hands on experience available to ensure safe operation and maximise production and availability of our customer's process and plant.
